DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States
- 2. Claims 16-18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Mariella Jr., et al. (US 5,404,026).
- 3. Regarding claim 16, Mariella Jr., et al. ('026) teaches in 1 and in column 4, line 12 through column 5, line 7 a method of manufacturing a hardened photocathode comprising: forming a photocathode having an input side for receiving photons and an output side for generating electrons in response to received photons; exposing the output side of the photocathode to cesium; exposing the output side of the photocathode to oxygen; and exposingthe output side of the photocathode to fluorine.
- 4. Regarding claim 17, Mariella Jr., et al. ('026) teaches the photocathode comprises a gallium arsenide (GaAs) mounted upon a transparent substrate.
- 5. Regarding claims 18 and 20, Mariella Jr., et al. ('026) teaches the output side of the photocathode is exposed to cesium, oxygen and fluorine until the photoelectric response of the photocathode is maximized and the steps of exposure are iterated until the photoelectric response is maximized (see column 5, line 4, read "optimized").

Allowabl Subject Matter

6. Claim 19 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record neither shows nor suggest the exposure of the photocathode to cesium, oxygen and fluorine comprises separate steps of exposure to cesium and exposure to a combination of oxygen and fluorine.
